

Paula Accord Programming Consultant Orientation

CC-TX-2026-05-28-001 | 2026-05-28 | Active Canon

Layer: Personnel / Project Onboarding

From: Cody Valle

To: Brandon Hatfield, LPC, Gregory, and Paula Accord

Authorized By: Brandon Hatfield, LPC

Summary

Paula Accord has joined ConCOREdance as a programming consultant, oriented to the transmission archive, current SwiftUI prototype, implementation doctrine, and near-term engineering queue.

Body

ID: CC-TX-2026-05-28-001

Status: Active Canon

Authorized By: Brandon Hatfield, LPC

Source: Local orientation record

Paula Accord has been added to the ConCOREdance project team as a programming consultant supporting focused implementation passes alongside Cody Valle.

Her orientation established the archive as project memory, not decoration. Paula was directed to treat the transmission archive as the canonical record for product doctrine, implementation history, design intent, and collaboration expectations. The current working context begins with the workflow-spine directive and implementation record: CC-TX-2026-05-27-006 and CC-TX-2026-05-27-007.

Paula reviewed the SwiftUI prototype structure, including the encrypted vault layer, fixture clinical data, active-session workflow, draft preview, and continuity rail. The orientation emphasized that ConCOREdance remains local-first, therapist-owned, export-friendly, and unsuitable for real PHI until the alpha security model receives independent review.

The agreed collaboration pattern is straightforward: Paula takes bounded, testable programming work that can move in parallel with Cody's architecture and archive stewardship. Cody remains responsible for integration judgment, canon consistency, and preserving Gregory's visual and philosophical direction.

Paula's first recommended workstream is the foundation layer beneath the workflow spine:

vault persistence tests, complete-session flow, editable continuity signals, note copy/export controls, and accessibility/resizing review.

Decisions

- Paula Accord is recognized as Programming Consultant for ConCOREdance.
- Paula should use the transmission archive as canonical project memory before beginning substantial implementation work.
- Paula's work should focus on bounded, testable programming passes that strengthen the product without disrupting design doctrine.
- No real PHI should be used in Paula's work; fixture/sample data remains the only acceptable development data.
- Cody will continue to coordinate integration, archive consistency, and final implementation alignment.

Next Actions

- Add Swift test coverage for VaultCrypto, VaultStore persistence, ClinicalFixtureData integrity, and draft output.
- Implement complete-session flow that turns an active draft into a ready-for-review note artifact.
- Add editable continuity signals with mutations persisted through VaultStore.
- Add copy/export controls for note drafts.
- Review active-session accessibility, keyboard behavior, contrast, and resize stability.
